

A Chance to Expand Your Creative Possibilities

At IBS in South Korea, many excellent scientists have gathered to further expand the potential of science and technology.

IBS (Institute for Basic Science) is a government-funded research institute, established with the sole purpose of driving forward the development of basic science in Korea. We have launched 25 research centers; each headed by an internationally renowned scientist with an operational budget of up to 10 million USD a year. IBS will be comprised of a total of 50 research centers in all fields of basic science, including mathematics, physics, chemistry, life science, earth science and interdisciplinary science. Our strategy is simple: establish an excellent research institute for basic science in Korea by recruiting exceptional scientists worldwide and fully supporting them in whichever research areas they wish to pursue for the long-term. IBS ensures that we select the best possible people for this challenge with our peer-review evaluation system. You are cordially invited to join IBS to boost basic science to the next level.
